

## 790712\_PNEUMATIC AND ELECTROPNEUMATIC POSITIONER

Single & double-acting Positioner, input signal  $4\div 20\text{mA}$  or  $0.2\div 1\text{bar}$  for proportional control of rotary actuators.

The positioner operates on the force-balance principle by comparing the standard signal transmitted from a pneumatic or an electronic controller device and the angular rotation of the stem, and conveys a positioning amplified pressure to the valve actuator.

### STANDARD MATERIALS:

Cover: Polycarbonate.

Body: Die cast aluminium with anti corrosive paint.

Position indicator: Antistatic plastic.

Slide valve (Box): Copper alloy.

Slide valve (Pivot): Stainless steel.

Receiver membrane: Nitrile rubber.

TYPE	SEGNALE DI COMANDO	ATEX IDENTIFICATION	Kg	CODE
